

Vivek Notes For Creating Volume and Snapshot

Create EBS Volume → Attach to EC2 → Put data → Create Snapshot → Create new Volume from Snapshot → Attach new Volume to EC2 in the same Availability Zone → Mount and verify data

Volume Creating

1. Check your EC2 Availability Zone

Go to:

AWS Console → EC2 → Instances → Select your EC2

Look for:

- **Availability Zone:** for example ap-south-1a
- **Instance ID**
- **Instance state:** Running

Important: An EBS volume must be created in the **same Availability Zone** as the EC2 instance if you want to attach it directly.

Part 1 — Create an EBS Volume

Step 1

Go to:

AWS Console → EC2 → Elastic Block Store → Volumes

Click:

Create volume

Step 2 — Configure

Example:

Setting	Value
Volume type	gp3
Size	10 GiB
Availability Zone	Same as EC2, e.g. ap-south-1a
Encryption	Default encryption
Tags	Name = Original-EBS-Volume

Click:

Create volume

Your volume will initially show:

State: Available

Part 2 — Attach Volume to EC2

Select your newly created volume.

Click:

Actions → Attach volume

Select your EC2 instance.

Example:

Volume: vol-xxxxxxx

Instance: i-xxxxxxx

Device: /dev/sdf

Click:

Attach volume

Now the volume should show:

State: In-use

Snapshot Creating

Part 3 — Create Snapshot

Now go back to:

AWS Console → EC2 → Elastic Block Store → Volumes

Select your original volume.

Click:

Actions → Create snapshot

Enter:

Description:

Snapshot of Original EBS Volume

You can also add a tag:

Name = EBS-Snapshot-Test

Click:

Create snapshot

Part 4 — Check Snapshot

Go to:

EC2 → Elastic Block Store → Snapshots

You should see:

EBS-Snapshot-Test

Status: Pending

Wait until:

Status: Completed

Now your snapshot is ready.

Part 5 — Create a NEW Volume from Snapshot

This is the important part of your practice.

Go to:

EC2 → Elastic Block Store → Snapshots

Select:

EBS-Snapshot-Test

Click:

Actions → Create volume from snapshot

Configure:

Setting	Example
Snapshot	Your snapshot
Volume type	gp3
Size	10 GiB or larger
Availability Zone	Same AZ as EC2
Encryption	Same/default
Tag	Name = Restored-EBS-Volume

Important

If your EC2 is:

ap-south-1a

create the new volume in:

ap-south-1a

Then click:

Create volume

Part 6 — Attach the New Volume

Go to:

EC2 → Volumes

Find:

Restored-EBS-Volume

It should show:

Available

Select it:

Actions → Attach volume

Select your EC2.

Example:

Instance: i-xxxxxxx

Device: /dev/sdg

Click:

Attach volume

Now:

Restored-EBS-Volume

State: In-use
